EDITOR'S NOTES

For the fourth time since 1979, I have changed computer systems. Bobbie and I have purchased an Alpha-Micro system with much more capacity

than my previous system. The usual problems are again here -- learning how to make it do what we want it to do.

This system has all of the capabilities of my last system from Matchmaker Technology, Inc. plus a 10 megabyte hard disk and three terminals for simultaneous multiple users. It is compatible with the system used at the Los Angeles County Museum of Natural History and any system using CP/M[™] operating system.

I also have a small new diazo duplicator to allow copying of entire microfiche in house. This, along with the reader/printer and camera/processors I already have, will allow complete storage and retrieval of *Opisthobranch* literature with film.

Please bear with me. I have one problem with the new computer system. It will not print out from the current word processor to paper so I have to convert everything to a new system. This is causing some delay in the production of the ON issues. Computers are wonderful devices but learning how to make them do what you want to do can be a problem. I will try to get out the current issues of the ON with the old system before I give it up.
